

! and TryFrom/TryInto

- TryFrom and TryInto with Error associated type of ! would be infallible like From and Into
- There is plan is to implement TryFrom/TryInto<Error=!> for every type that implements From/Into
- Currently it is supported only as return type:

```
1 ▾ fn foo() -> ! {  
2     panic!("boom!")  
3 }
```

Thank you!
